#### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

#### Status

- 1) ☒ Responsive to communication(s) filed on 23 November 2005.
- 2a) ☒ This action is **FINAL**.                      2b) ☐ This action is non-final.

## DETAILED ACTION

### ***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over Ghitza et al. (Hereinafter "Ghitza") (US Patent 6,609,092) in view of Chantzis (US Patent 6,417,435).

Ghitza discloses a method of evaluating sound quality on an apparatus, comprising the steps of: collecting a sound caused from image forming apparatus at a location apart a certain distance from said apparatus (Fig. 1, source 110); measuring a psychoacoustic parameter of the collected sound (objective measurement 116); deriving a subjective evaluation value from the collected sound through a subjective evaluation (subjective test 112); subjecting said measured psychoacoustic parameter and the subjective value to a multiple regression analysis (regression analysis 118); computing a sound quality evaluative equation for assuming a subjective evaluation value (Col. 3, lines 1-6), based on a result from the multiple regression analysis, using said psychoacoustic parameter; and computing a proper range of the subjective evaluation value assumed by the sound quality evaluative equation in said apparatus (output of 128). Ghitza does not disclose the apparatus being an image forming apparatus or the regression being multiple regression. However, Ghitza discloses that the invention

Art Unit: 2644

provides a method for estimating subjective measures of audio signal quality using objective measures and may be an type of audio signal (Col. 1, lines 54-65). It would have been obvious to one of ordinary skill in the art at the time the invention was made to apply the method as taught by Ghitza with an image forming apparatus to provide method for estimating subjective measures of audio signal quality using objective measures of an audio signal. Chantzis discloses an acoustic testing device which using multiple regression (see claim 5) to measure the performance of an apparatus (Col. 1, lines 13-18). Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to use multiple regression to analyze sound from an apparatus by increasing the parameters to provide a more accurate evaluation.

### ***Allowable Subject Matter***

2. Claims 2-19 allowed.
